**-PAGE SENT TO PLUMBERS – FOR REFERENCE ONLY-**

**Scope of Work:**

Install a residential water service from the water meter pit at the curb line to the home at a depth of 36" to 48" disconnect the well pump, storage tank and conditioning system from the water piping in the home and connect the new water service to the existing water pipes in the home. **There shall only be one (1) water supply connected to the home's water piping system.**

**Materials Required:**

PVC plastic pipe 3/4" iron pipe size rated at 200 psi and various fittings to connect to existing water pipes in the home.

**Cost Estimate:**

Cost to dig trench on property to a depth of 36" to 48", install 3/4" iron pipe size PVC pipe (average installation is 20') and backfill trench.

**Labor and Materials:** \_\_\_\_\_

Cost of labor and material to connect to the water meter at curb line.

**Connection cost per unit:** \_\_\_\_\_

Cost of labor and materials to disconnect the well pump, storage tank and conditioning system from the water piping in the home and connect the new water service to the existing water pipes in the basement or crawl space of the home.

**Disconnection of Well:** \_\_\_\_\_

Hourly cost for labor if a problem is encountered

**Extra Labor per hour:** \_\_\_\_\_

It is understood that some installations may be more difficult such as homes on concrete pads with no basement or crawl space and these installations may be more costly. This estimate also does not include any concrete or blacktop repair or replacement.
